

Webinar for Standard Drafters: All about Publications.

<p>1</p>	<p>It is totally understandable, why technical content can't be changed after FV. But, the correction of obvious mistakes e.g. a missing value, should be possible without a complicated procedure including the BT. It is simply not helping if these things can't be corrected.</p>	<p>We take all corrective action at all stages on a case by case basis. If we see that something has been wrongly introduced during the editing, we can correct it. But, at publication stage, the text has been voted upon, and if we start to change things – especially things which should have been picked up during drafting – then it is unfair on the members who have taken time to read and vote. We need to ensure continued transparency and fairness.</p>
<p>2</p>	<p>After having decided to skip the FV in case of we need to take into account an editorial comment that is finally considered as technical one by CCMC, is it possible to turn the previous decision and start the FV</p>	<p>If the standard has been ratified, a TC decision will be needed: ""TC decision to revert the decision to skip the FV". Once that decision is taken, the Technical PM responsible will have to request a BT decision to de-ratify the standard. Once the standard is de-ratified, it will be possible to resume the formal vote process.</p>
<p>3</p>	<p>I was always under the opinion that a Corrigendum was only for editorial changes and not technical changes which had to be dealt with by an amendment.</p>	<p>Indeed, amendments should always be the preferred means for corrective action. However, we can allow corrigendum when, and only when, a technical error or ambiguity will lead to incorrect or unsafe application of the publication (and waiting for an amendment to be published would be dangerous). Corrigenda shall be scarcely used.</p>
<p>4</p>	<p>Is there a minimum number of participants for personalised trainings?</p>	<p>No, a one-to-one training is perfectly possible too! Just get in touch with Production@cencenelec.eu and you will be put in touch with someone to organise something to suit your needs.</p>
